DOMESTIC TOURISM STATISTICS

The same concept/definition of domestic tourism:

- Domestic visitor is an Indonesia resident who travels voluntarily within Indonesia territory outside his/her usual environment, less than 6 (six) months and his/her purpose of travel is not for studying or earning wages and salaries in the place visited, and he/she:
  - travels to commercial tourism object, or
  - stay in hotel or commercial accommodation, or
  - the distance of round trip is equal or more than 100 km
The domestic visitor is obtained from the domestic visitors survey (household approach). The survey was conducted in line with National Socio Economic Survey (NSES).

**Improvement**: since 2011 the survey was conducted quarterly, and some questions related to domestic tourism added in KOR questionnaire of NSES.

From the survey we get the information of the number of domestic tourism by origin and main destination province, purpose of visit, and demographical characteristics of domestic tourism.

Also, in 2012 we conducted survey to capture the expenditure of domestic tourism (module trip), and other characteristics of domestic tourism.

Some constraints encountered in collecting domestic tourism data, particularly expenditure data:

- For domestic visitor’s expenditure survey:
  - The recalling factor
  - Size of sample
