COVID-19 poses new challenges

Gatherings of people have been prohibited in many countries

Restrictions in the number of people allowed in any area at any one time have started to be put in place

Using manual methods to control the number of tourists in an area is not accurate and can be costly
Managing occupancy limits will be challenging for many businesses or organizations.

Lack of clarity could lead to unknowingly violating established occupancy limits and endangering public health.

SmartOccupancy enables businesses to operate safely.
SmartOccupancy gives you real-time visibility on occupancy levels.

When you have an occupancy limit – set the threshold number and the sensor will alert you to when you are almost at capacity.
Solution Summary

- **Accurately** counts number of people entering and exiting.
- **Real-time counting** displays number of people in the building or area.
- **Zonal alerts** can also be set for concessions or other areas.
Real-time visual color indicator
Enables staff to instantly recognize when a breach in the occupancy threshold is about to occur:

• On tablet
• Screen
• Phone (trialling)
• Desktop

Placed at an entrance with countdown for queue management

• Easy to read
• Traffic light system recognized globally
• Gives high confidence of environment
• Reassures that there are safeguarding measures put in place
