

## Global Tourism Crisis Committee

Meeting on the occasion of the Global Tourism Crisis Committee, virtually from Lisbon, Portugal, on 9 December 2020, to accelerate the coordination of international cross-border travel principles and protocols in view of a safe and seamless restart of tourism, the members of the Committee recalled, in line with WHO and ECDC/EASA recent guidance, that:

1. The prevalence of COVID-19 in travellers is estimated likely to be lower than the prevalence in the general population or among contacts of confirmed cases.
2. Travellers should not be considered as a high-risk population and should be subject to the same regulations or recommendations as applied to the local population.
3. In the current epidemiological situation, quarantine or systematic testing for SARS-CoV-2 of air travellers is not recommended.

The Committee called for

1. Support to WHO in its efforts to work with partners to update and review evidence-based guidance for international travel consistent with International Health Regulations provisions focusing on providing guidance for effective, risk-based, and coherent approaches (including targeted use of diagnostics and shorter quarantine lengths or the abolishment of quarantines) that consider transmission levels, response capacities in origin and destination countries, and relevant travel-specific considerations.
2. The establishment of internationally agreed evidence-based risk-assessment indicators and their harmonization among countries as is the case of the European Union traffic light system
3. Countries to ensure that measures affecting international traffic are risk-based, evidence-based, coherent, proportionate and time limited.
4. The implementation of the International Civil Aviation Organization (ICAO) CART Take-off guidance and the Manual on Testing and Cross-border Risk Management Measures
5. The stepping up of the coordination regarding the vaccination certificates to ensure a timely definition on common and harmonized principles and protocols related to vaccination certificates and international travel
