

Publication of first international standard on accessible tourism for all, led by UNWTO, Fundación ONCE and UNE

- The standard establishes requirements and guidelines with the aim of ensuring equal access and enjoyment of tourism for all.
- As from today, this document is available in Spanish, having been translated and included in the Spanish national catalogue of UNE standards.
- In the European Union alone, the sector represents a potential market of 80 million persons, or 130 million if companions are included.

Madrid (Spain), 15 July 2021. *The International Organization for Standardization (ISO) has published the world's first standard on accessible tourism, ISO 21902 Tourism and related services – Accessible tourism for all – Requirements and recommendations. This is an international standard offering guidelines to ensure access and enjoyment of tourism for all on an equal basis.*

The [World Tourism Organization \(UNWTO\)](#), [Fundación ONCE](#) and [UNE \(Asociación Española de Normalización\)](#) led the development of this pioneering, [cross-cutting standard on an international level](#), focusing on accessible tourism throughout the whole value chain of the tourism sector.

This is a business that in the European Union represents a potential market of 80 million persons, or 130 million if companions are included. Moreover, the market is growing considering the population pyramid in many European countries, and this is also the case for other parts of the world.

As from today, this standard is available in Spanish as [UNE-ISO 21902](#), having been translated and included in the UNE national catalogue of standards. It addresses service providers and tourism operators as well as public administrations and tourism destinations.

The UNE-ISO 21902 standard establishes requirements and recommendations for accessible tourism. For example, in order for a beach to be considered accessible, it must offer showers, toilets and a route that can be used by all. Also, accessible pedestrian routes in a natural environment must provide, amongst other requirements,

a continuous, firm and stable floor and signalling and must offer details on the itinerary before the start of the route. In general, in their written communications, tourism establishments must use clear and simple language following a logical sequence, with images and graphic symbols where appropriate, and with contrasting colours and easy-to-read fonts.

It is hoped that the standard will become a key tool for enforcing the right of everyone to enjoy tourism and leisure. In spite of advances over recent decades, in many countries there is still much to be done before the tourism sector takes into account the needs of the more than 1 billion disabled persons in the world.

Because of the way in which environments, infrastructure and a wide range of tourism services have been conceived, disabled tourists often face challenges starting from the actual planning of their trip and including their experience in the destination. This standard aims to trigger change.

Throughout 2021 and 2022, UNWTO, Fundación ONCE and UNE, together with experts, will hold an awareness campaign addressing their members and associates to stress the harmonization of accessible tourism on a global scale by means of standards.

This worldwide standard was developed by the International Standardization Committee ISO/TC 228 on Tourism and related services, in which UNWTO coordinated working group WG14 bringing together 85 experts from more than 35 countries and five relevant organizations in this area who were responsible for the drafting. Fundación ONCE held the technical leadership and UNE provided the secretariat and coordinated with ISO.

About Fundación ONCE

Fundación ONCE for Cooperation and Social Inclusion of Persons with Disabilities is an instrument for solidarity within the ONCE. It was set up in 1988 to improve the living conditions of other groups of persons with disabilities, by means of programmes for inclusion in the world of work and training, as well as dissemination of the concept of universal accessibility, with the creation of globally accessible environments, products and services.

About UNE (Asociación Española de Normalización)

UNE is an entity that is legally responsible for developing technical regulations or standards. Such standards reflect the consensus of the market on best practices in key areas for the competitiveness of organizations and are the result of joint efforts by economic sectors and the administration. 12,000 experts participate in the drafting of standards in the 226 Technical Standardization Committees working in UNE. UNE

represents Spain in standardization bodies on an international level (ISO and IEC), in Europe (CEN and CENELEC) and in COPANT (America); it is also the Spanish standardization body in ETSI. UNE also carries out intense work in the field of International Cooperation.
