

# Climate action CO2rism

UNWTO INSTO-network

28.September 2021

**The Governments most important instrument for supporting trade and industry**

# **Innovation Norway**

**Focus industries;  
tourism and creative industries, bio economy, ocean space, health and welfare, smart societies, energy**

**Includes the National NTO with marketing mandate (VisitNorway)**

# National tourism strategy 2030

**Big impact,  
small footprint**

# National Tourism Strategy 2030

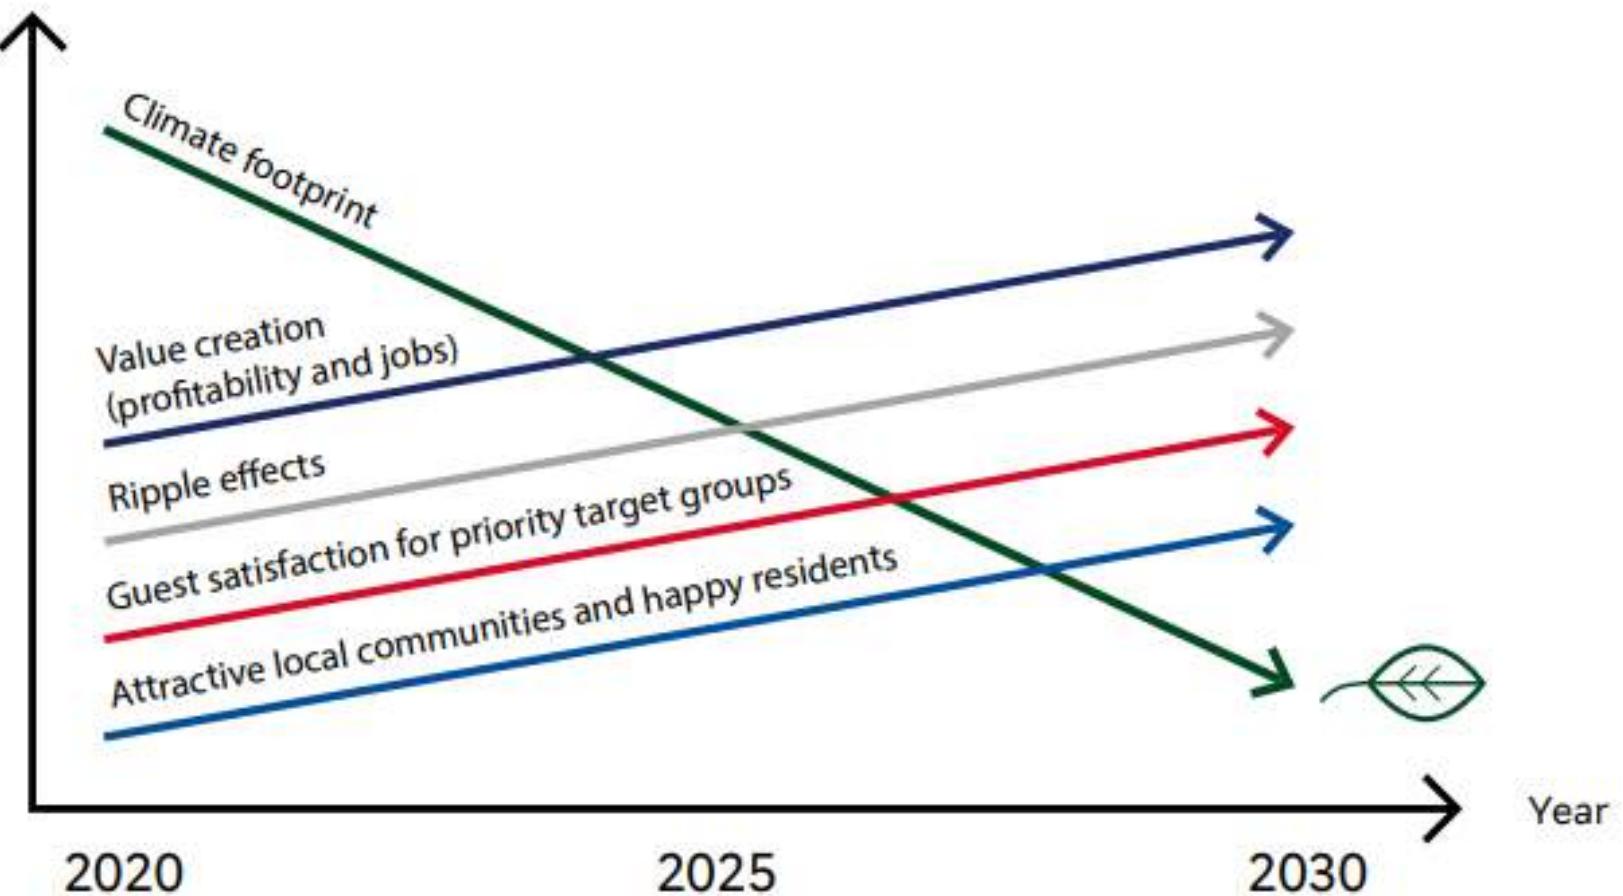

Big impact, small footprint

© Eirik Aaråslien - Pölder agency

From the tourist industry. To the Government. April 2021

# Goals for 2030

# Sustainable destination

(National report on SDG 12b)

# Enabling destination management

## Standard

## Management

- Local project manager
- External process leaders
- External audits

## Process

- Involve
- Plan
- Implement
- Measure
- Monitor

## Tools

- Portal
- Surveys
- Manuals
- Training
- Network

## Visibility

- Visitnorway.com
- Presentations
- Press
- Awards

# The standard

5 themes  
42 criterias  
104 indicators

Covers destination management in culture and society, climate and environment, social economy and resilience

Revised standard 3.0 by 2022,  
stronger climate indicators due to new measurement tool, CO2rism

# Measurement indicators

Sustainable destination 3.0 (destinations)

- Total CO2 emissions caused by tourist transport to Norway
- Total CO2 emissions caused by tourist transport at destination
- Actions implemented for reducing tourist transport emissions to/from the destination
- Actions implemented for reducing transport emissions at the destination
- No. and share of enterprises eco certified (emissions part of certification)
- Existence of climate and climate change plans involving tourism at the destination

National Strategy (in progress)

- Total emissions (CO2) from tourism transport (10% reduction annually)
- National actions for reducing emissions from tourism eg. ClimateSmart marketing

# **CO2rism**

**(in line with UNWTO methodology and sources)**

# CO2rism

## UTSLIPPSKALKULATOREN CO2RISM

- FOR BEREGNING AV CO2-UTSLIPP FRA TURISTERS TRANSPORT TIL OG I NORGE

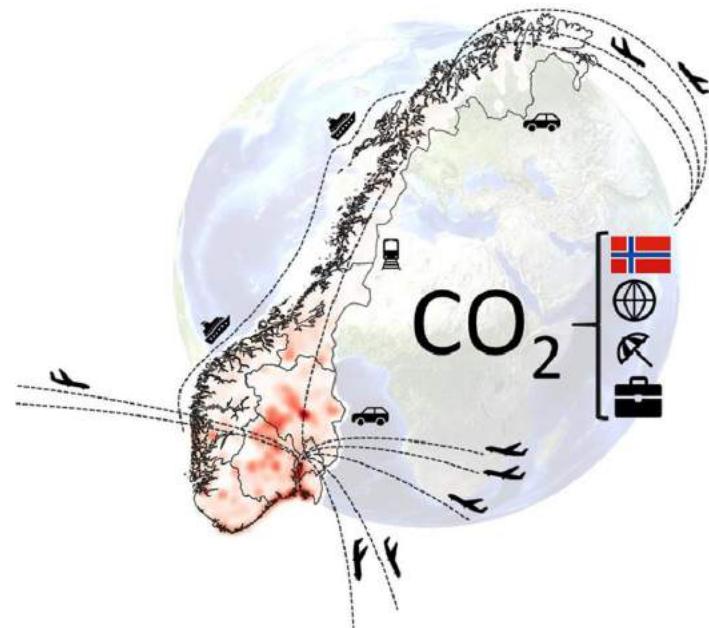

Verktøyet er laget for aktører i reiselivet som ønsker kunnskap om transportrelaterte CO2-utslipp inn i sin strategiske planlegging.  
Brukeren er en enkeltbedrift, en destinasjon, eller en hel landsdel.

Visit Norway Innsikt → Utslippskalkulator

# Basic content calculator

- Choice to incl business travel
- Region in Norway
- No. Business/Leisure (by choice)
- Length of stay (default or by choice)
- Market (default or by choice)
- Transport modes (default)

# High yield

# Low impact

# Opportunities and challenges

# Challenges both at national and local level

## Official reporting

As a country's obligations are to report emissions within its boundaries, **emission reduction generally focus on its territory**, and can make it insufficient to target tourism sector as a whole

**Tourism (as a whole) are not part of any official accounting and reporting systems on emissions, but rely on internal strategies and engagement**

## Sector vs tourist

The effects of tourism-related transport can be understood by **analysing the emissions** associated with transport according to purpose (holiday and business), and country or region of origin (markets)

**Tourism passenger based accounting could inspire the industry to a responsible shift towards strategies for low emission tourism**

## Market considerations

The advantage of **tourism passenger based accounting** is that tourism stakeholders can build more informed considerations also in their market priorities

**Low emission tourism could be used to design targeted marketing strategies that balance the socio-economic benefit against low emissions**

# Opportunities national

1. Building national data on tourist transport through CO2rism
2. ClimateSmart market planning, combining existing consumption calculator and CO2rism (funded by Government september 2021)
3. Adding reference values on accommodation and adventure to transport to get a broader picture

# Opportunities at local destination

1. Work on indicators in Sustainable destination to build competence and visualise emission reductions – and implement actions, ex longer stays
2. Mobility projects (soft mobility, public transport solutions, green routes, electrification of boats/ferries and road etc)
3. Testing solutions where local mobility for tourism also benefits local inhabitants (case Norefjell) incl new surveillance systems for effective transport planning

But operational tourism climate actions demands (new) **competence** and knowledge, a **broad perspective** in planning, bringing **new stakeholders** and **knowledges** together

## Methodology behind the CO2RISM calculator

Henrik Grythe and Susana Lopez-Aparicio

A photograph of a kayak on a calm lake at sunset. The kayak is positioned in the lower center, facing towards a range of mountains. The sky is filled with warm orange and yellow hues from the setting sun. The water reflects these colors and the dark silhouettes of the mountains. The overall atmosphere is peaceful and inspiring.

**Paddle on and keep the goal in sight!**

# Thank you!

Ingunn Sørnes
